GARDEN ACCESSORIES

VegTrug™
See what you can grow

Grow Care

Grow Care monitors and reports on:

-  **Moisture**
-  **Fertility**
-  **Light Intensity**
-  **Temperature**

The Grow Care Home and Garden are a pair of smart sensors that make growing easier; anyone can become a green fingered expert.

The Grow Care unit connects via bluetooth to your smart phone providing information on soil moisture, fertility level, temperature and light intensity.

Together, the sensor and app give you specific feedback on caring for your particular plant.

The app carries information on over 6000 plants and allows you the option to connect to a Grow Care Community.

LOW VOLTAGE GARDEN LIGHTING

Hikari Renovation

The Japanese word for light is “Hikari”.

As our new range of garden lighting has been designed in Japan by Takasho Digitec, we felt it apt to call this range “Hikari - Renovation”.

Hikari Renovation uses a Low Volt system. It is designed so that lighting installation work can easily be installed by DIY gardeners and uses new LED lighting technology for optimal brightness. The cables and lights are easily connected thanks to the pre-installed cable connector plugs (no messy or complicated wiring)

You can commence your lighting project with the basic starter kit which allows you to plan and install an effective lighting display and then should you wish to add more lights to expand your stunning display, there are individual lights, extension cables and connectors available to easily achieve this.

Three starter kits with everything you need to get started in one box that can be selected depending on the type of lighting effect you want to achieve:

Lighting for Wall (225lm)

Create a brilliant display by projecting the silhouette of your favourite tree or garden sculpture against a wall, fence or screen.

Lighting for Tree (240lm)

One of the classic uses of this type of light is uplighting trees in gardens. If your tree has an open, leafy structure, you can install the light close to the base of the trunk. The angled light illuminates the central branches and leaves of the tree making a stunning display.

Lighting for Ground (187lm)

Ground lighting is most suitable for lighting up low growing plants, flowers and garden paths. The light spreads to a range of about 90cm in diameter, so when installing two or more lights, you can create shades of bright and dark areas. This type of light plays with shadows beautifully.

Our Starter Kits include:

2 x Lights

Each with 5m cable

1 x Controller

Turns the lights on automatically when dark and has a built in timer to turn off each night after a set number of hours. Set and forget - no need to manually turn on and off each night.

1 x Additional Extension Cable

5m in length

1 x 3 way Branch Connector

Direct your lighting to various garden spaces

2 x Replaceable LED Globes

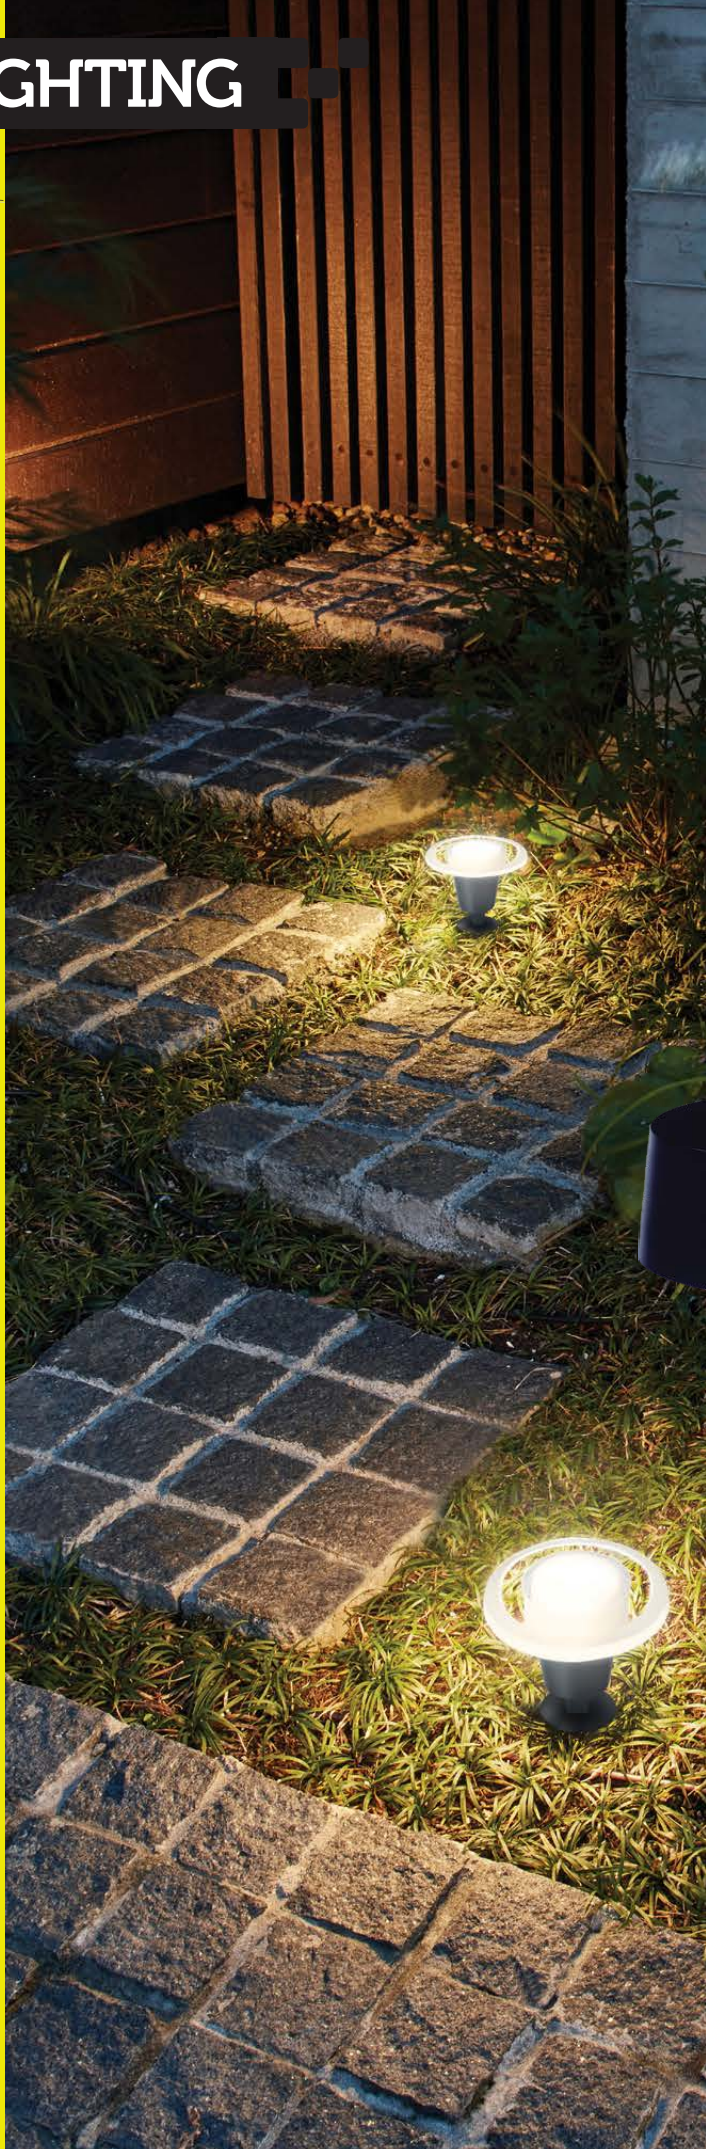

Easy to replace should the need arise

All components are available for purchase separately, so that you can easily add on to the basic Starter Kit and you can install up to 8 assorted lights, with a total cable length of 30m per Controller.

DIY lighting is a fast, relatively inexpensive way to change your backyard from run of the mill to magical.

This lighting range is supported with user information via the website: hikarenovation.com which shows installation instructions, ideas on techniques that can be used and short videos.

Images and examples of completed lighting projects can be seen via the [hikarenovation](#) facebook and instagram pages.

Fountain & Waterfall Pumps

Ideal for all decorative ponds – a range of sizes for operating everything from small water features to larger combined fountain and waterfall displays

- 1 High efficiency motor for low running costs and long life.
- 2 Flow controls to adjust size of fountain and waterfall independently.
- 3 Ball joint for fountain stem angle adjustment.
- 4 Anti-clog foam free inlet cage reduces maintenance.
- 5 Special outlet for waterfall or feature with quick connect hose coupling.
- 6 Telescopic fountain pipe.

Solids Handling Pumps

The new aquaforce solids handling pumps have been specifically designed for filtration, waterfalls or watercourses.

Hozelock have been developing and testing these pumps for the past four years to ensure maximum power efficiency, flow rates and reliability. the larger models (6000+) feature a second inlet, which allows the consumer to operate an optional skimmer or satellite filter.
